

FOOD BUZZ

Created and Presented by:

Mary Lou Hoover

Kalvin Nguyen

Todd Taylor

Sam Kilpatrick

Elevator Pitch

People like to eat and people like to drink, but they can never decide on either.

Why not have a web app that pushes you in the right direction by giving you choices perfectly tailored to your search? This simple and easy to navigate site will become your one-stop recipe source.

CONCEPT

SEARCH LESS. ENJOY MORE.

AS A user looking for food and drink ideas
I WANT to go to a website where I can effortlessly
locate food and drink recipes
SO THAT I can search less and enjoy more.

We chose this because we needed a solution since NFL and MLB API's are too expensive.

PROCESS

- We created a base HTML and CSS which included a framework from Bulma
- We used 2 different APIs to generate recipe searches.
 - Food API: Edamam
 - Cocktails API: The Cocktail DB
- Mary Lou - Base HTML & CSS, ReadMe, presentation slides
- Sam - HTML, CSS, Bulma, Wire Frame
- Kelvin- Javascript, API
- Todd- Javascript, API, snark

DEMO

CHALLENGES

SUCCESES

Challenges:

- Navigating between the framework and necessary CSS changes
- Using the new framework, Bulma, slowed us down
- Finding a free API
- Learning how to navigate git in the terminal and resolving merge conflicts

Successes:

- Easy to agree and accommodate each other's needs during the process
- Completed individual responsibilities and daily zoom meetings
- Building a working website with a team

Future Development

- Find an api that hosts recipes so they can be added directly to the site instead of linking to another site.
- Provide calorie information on the dishes and allow users to put in the amount they would like to limit the dish to.
- Allow users to search for beverages and get multiple suggestions
